The Challenge

Late in 2002, Teleflex Marine Corp. began a design program for a new ergonomic marine control handle. They needed a customized switch package to control engine trim in the handle and tilt control of the engine for trailering. Due to the harsh marine environment, the switch needed to be completely sealed, hold up to the harmful effects of the sun's UV rays, and withstand exposure to gasoline and oil. Finally, Teleflex wanted something that would look attractive in the handle, give positive feedback to the operator, and withstand rigorous operator use.

Successful Solution

Our design engineers applied a new sealing technology to increase reliability of electronics in the harsh marine environment. Our efficient manufacturing processes allowed Teleflex to quickly introduce their new product to the marketplace. Delta Systems came through for Teleflex and we can come through for you!
